SOFTWARE

Commodore/Ivan Berg Programs signal a new generation of powerful and practical software for home computers.

All Commodore/Ivan Berg VIC Programs can be used on the VIC-20 right away; they're jargon-free and require no previous knowledge of computers and computing. All titles use two cassettes. One cassette contains the OPERATING SOFTWARE unique to the program. The other cassette contains the DATA to be used by the program.

To produce the Best Programs for The Best Home Computer in the World we married mainframe computer programming techniques with hard-won publishing expertise. The program in this pack is but one of a complete range of home and educational software which demonstrate the success of the marriage.

All programs require the use of an 8K or 16K plug-in RAM Expansion Cartridge with the VIC. **The programs will not run in an unexpanded machine or in any other make of computer.** Your dealer will have stock of the necessary expansion cartridge. In case of difficulty please contact Commodore Business Machines (UK) Limited at the address below.
